

Installation of Rollbanner CNFS

**Rollbanner CNFSA (aluminium cap),
postersize: 60, 70, 80, 90, 100 or
120 x 200 cm.**

**Rollbanner CNFSP (plastic endcap),
postersize: 80 x 200 cm.**

The Bannersystem is delivered in a cardboard box (weight: 2,6 kg).

Do not open the box with a knife or sizzers!!! You might damage the transportation bag.

In the packaging you'll find a nylon transportation bag in which the whole system is stored.

In the transportation bag are:
- Aluminium case with a self-tightening roll-up system and two rotating footpieces;
- 3-piece pole;
- (top) Poster-clamp profile.

At the bottom side of the casing is a safety pen for stopping the system from rolling up. Take this out and lay this within arm's reach.

Turn the footpieces at the bottom-side of the casing for a stable stand. Pull out the approximately 25 cm of manual that is inside the casing.

Aluminium endcap

Plastic endcap

Take the safety pen and stick it in the hole at the side of the casing. This will stop the manual from rolling up again.

On the top-edge of the manual is an adhesive strip for assembling the poster onto the system

Make sure the poster is mounted on as straight as possible, so that it rolls-up easily and straight into the casing. Because the adhesive strip is very sticky, try to do it in as few attempts as possible.

Now take the top-profile with the adhesive strip.

ps: this manual continues on the next page.

Pull away the protection strip (a) and mount the poster onto the profile (b). Make sure this is done perfectly straight.

11

Now take out the safety pen to bring back the tension.
IMPORTANT: when you pull out the pen, make sure something or somebody stops the poster from rolling up immediately or too fast. This can damage the poster or even the roll-system.

12

If you are deciding to change posters every once in a while, put the pen back where it belongs, or keep it somewhere else on a safe place. You'll be needing this to take away the tension when mounting the poster.

13

Finally put the 3-piece pole into the hole at the topside of the casing. At the top of the pole there is a hook on which you can mount the top-profile

14

It is possible to change the poster multiple times, but you'll have to use new tape.

15

TIP: Doublesided bannertape (code: BT0) is very suitable for this kind of applications.
